

This is in regard to the NABpetition seeking to stop XM Radio from providing XM Instant Traffic & Weather.

As one who travels between Northern NY and Florida several times a year I depend on XM radio for entertainment and for Traffic & weather. It is very hard to keep searching for radio stations in areas that I will be travelling through on the AM and FM bands to get weather and traffic. XM on the other hand provides weather and traffic and with my printed schedule it is easy to find the channel for the area I am interested in.

Does AM & FM have a monopoly on what can be broadcast????
